

ISTANBUL AREL UNIVERSITY

FACULTY OF ENGINEERING & ARCHITECTURE

NAME : İbrahim Başar COURSE: Visual Based Programming

SURNAME: YARGICI Term: 2020-2021 Spring
STUDENT ID: 180303006 Lecturer: Metin Zontul

DEPARTMENT : Computer Engineering (2) DEADLINE: 07.06.2021

Midterm-2 Assignment

That document contains the solutions, pseudocodes and flowcharts of **8.8**, **12.6**, **13.8** and **17.8** questions, from "Deitel C Sharp How to Program" book.

I uploaded my works to GitHub as a public repo. After you say okay, now you can make it private, I will. You can visit and see my Visual Based Programming repo from: https://github.com/basarYargici/VisualBasedProgrammingMidterm2

Format of solution papers:

- 1. Pseudocode
- 2. Flowchart
- 3. Source Code
- 4. Output of program

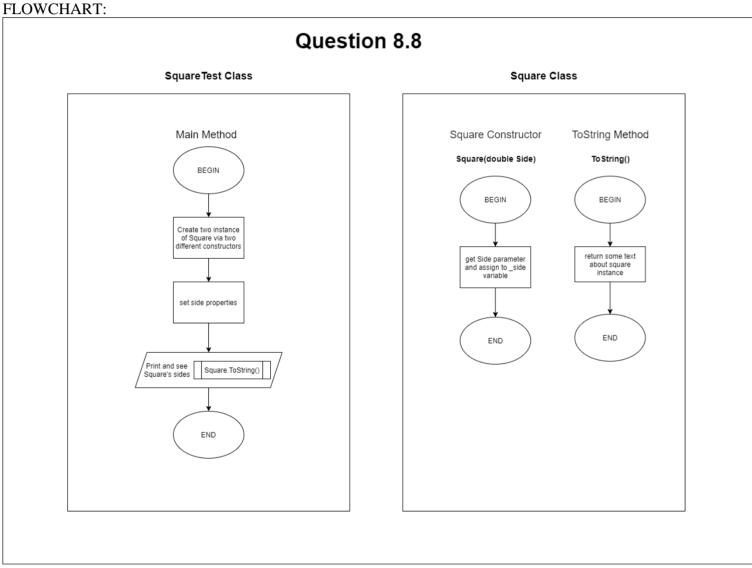

Question 8.8:

Write a console application that implements a Square shape. Class Square should contain an instance property Side that has get and set accessors for private data. Provide two constructors: one that takes no arguments and another that takes a side length as a value. Write an application class that tests class Square's functionality.

Solution 8.8:

PSEUDOCODE:

- There should be a class named Square
- Square class should have side attribute which will be private and will be accessed via getters and setters
- Square class will have two constructors, one will have side parameter
- SquareTest class will test square instances.
- One instances' side property will be given via parameterized constructor, others via setter
- Both sides will be printed

Question 12.6:

Extend the program of Fig. 12.30 to include options for changing the size and color of the lines drawn. Create a GUI similar to the one in Fig. 12.35. [Hint: Have variables to keep track of the currently selected size (int) and color (Color object). Set them using the event handlers for the radio buttons. For the color, use the various Color constants (such as Color.Blue). When responding to the mouse moves, simply use the size and color variables to determine the proper size and color.]

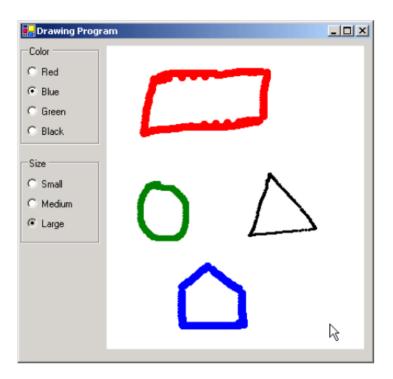

Fig. 12.35 GUI for Exercise 12.6.

Solution 12.6:

PSEUDOCODE:

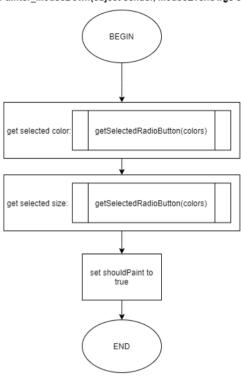

- There should be two GroupBoxes which will contains colors and sizes as RadioButtons
- On the right side, there should be drawable area which we will draw our shapes
- Program should take the selected size and color RadioButtons and later it should adjust the paint brush

Question 12.6

Painter Class

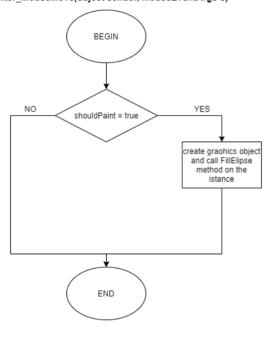

Mouse Down Method

Painter_MouseDown(object sender, MouseEventArgs e)

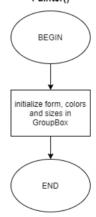

Mouse Move Method

Painter_MouseMove(object sender, MouseEventArgs e)

Painter Constructor

Painter()

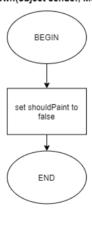

Get Selected RadioButton Method getSelectedRadioButton(colors)

search selected item in given GroupBox

return if there is a selected RadioButton

Mouse Up Method

Painter_MouseDown(object sender, MouseEventArgs e)

```

Question 13.8:

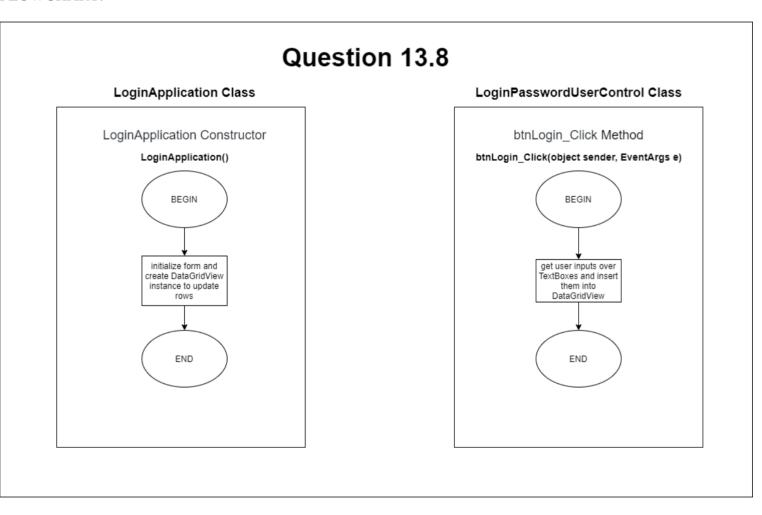

Create a UserControl called LoginPasswordUserControl. The LoginPasswordUserControl contains a Label (loginLabel) that displays String "Login:", a TextBox (loginTextBox) where the user inputs a login name, a Label (passwordLabel) that displays the String "Password:" and finally, a TextBox (passwordTextBox) where a user inputs a password (don't forget to set property PasswordChar to "*" in the TextBox's Properties window). LoginPasswordUserControl must provide public read-only properties Login and Password that allow an application to retrieve the user input from loginTextBox and passwordTextBox. The UserControl must be exported to an application that displays the values input by the user in LoginPasswordUserControl.

Solution 13.8:

PSEUDOCODE:

- There should be a UserControl which will contain login and password Laybels and TextBoxes
- There can be a DataGridView to show login and password fields
- When user enters input, it should be hidden as '*'
- Later on, created UserControl should be implemented on a Form Application

Question 17.8:

You are the owner of a hardware store and need to keep an inventory of the different tools you sell, how many of each are currently in stock and the cost of each. Write a program that initializes the random-access file hardware.dat to 100 empty records, lets you input data relating to each tool, enables you to list all your tools, lets you delete a record for a tool that you no longer have and lets you update any information in the file. The tool identification number should be the record number. Use the information in Fig. 17.24 to start your file.

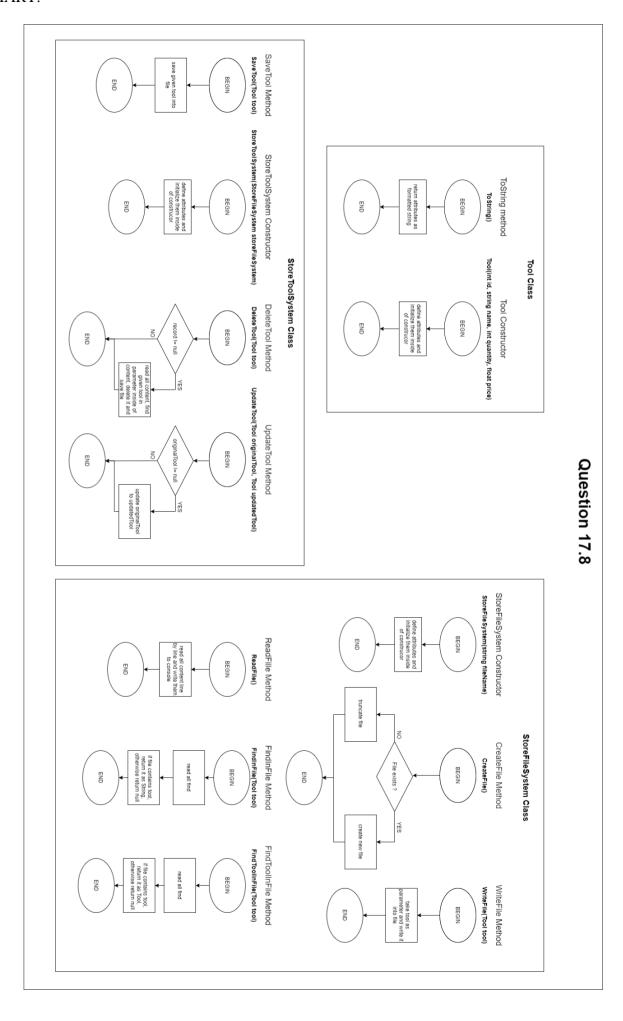

Record #	Tool name	Quantity	Price
3	Electric sander	18	35.99
19	Hammer	128	10.00
26	Jig saw	16	14.25
39	Lawn mower	10	79.50
56	Power saw	8	89.99
76	Screwdriver	236	4.99
81	Sledge hammer	32	19.75
88	Wrench	65	6.48

Fig. 17.24 Inventory of a hardware store.

Solution 17.8:

PSEUDOCODE:

- There should be a Tool entity class which represents hardware tool in our program.
- There can be two different system classes: StoreFileSystem, which is responsible of file processes, and StoreToolSystem, which is responsible of adding,updating and deleting product from database.
- Program lets user input data relating to each tool, enables user to list all your tools, lets user delete a record for a tool that user no longer have and lets user update any information in the file.
- The tool identification number should be the record number.
